

STATEMENT OF BASIS/TECHNICAL SUMMARY AND
EXECUTIVE DIRECTOR'S PRELIMINARY DECISION

POSTED
2/21/2024 4:15:16 PM
Rebecca Huerta
City Secretary

DESCRIPTION OF APPLICATION

Applicant: City of Corpus Christi; Texas Pollutant Discharge Elimination System (TPDES)
Permit No. WQ0005289000 (EPA I.D. No. TX0139874)

Regulated activity: Industrial wastewater permit

Type of application: New permit

Request: New permit

Authority: Federal Clean Water Act (CWA) §402; Texas Water Code (TWC) §26.027;
30 Texas Administrative Code (TAC) Chapter 305, Subchapters C-F, and
Chapters 307 and 319; commission policies; and Environmental Protection
Agency (EPA) guidelines

EXECUTIVE DIRECTOR RECOMMENDATION

The Executive Director has made a preliminary decision that this permit, if issued, meets all statutory and regulatory requirements. The draft permit will expire at midnight, five years from the date of permit issuance according to the requirements of 30 TAC §305.127(1)(C)(i).

REASON FOR PROJECT PROPOSED

The applicant has applied to the Texas Commission on Environmental Quality (TCEQ) for a new permit.

PROJECT DESCRIPTION AND LOCATION

The applicant proposes to operate Inner Harbor Desalination Plant, a seawater desalination facility.

The wastewater system consists of taking raw seawater and producing potable water. The wastestreams will be generated by pretreatment, membrane filtration, and desalination processes. The wastestreams from these processes will be comingled for discharge through Outfall 001. The initial phase of producing water is at 20 million gallons per day (MGD) with the final phase increase to 30 MGD.

This permit does not authorize the discharge of domestic wastewater. All domestic wastewater must be disposed of in an approved manner, such as routing to an approved on-site septic tank and drainfield system or to an authorized facility for treatment and disposal.

The facility is located at the intersection of Nueces Bay Boulevard and East Broadway Street, in the City of Corpus Christi, Nueces County, Texas 78401.

Discharge Route and Designated Uses

The effluent is discharged directly to Corpus Christi Inner Harbor in Segment No. 2484 of the Bays and Estuaries. The designated uses for Segment No. 2484 are non-contact recreation and intermediate aquatic life use. The effluent limits in the draft permit will maintain and protect the existing instream uses. All determinations are preliminary and subject to additional review and revisions.

STATEMENT OF BASIS / TECHNICAL SUMMARY AND
EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES Permit No. WQ0005289000

Antidegradation Review

In accordance with 30 TAC §307.5 and TCEQ's *Procedures to Implement the Texas Surface Water Quality Standards* (June 2010), an antidegradation review of the receiving waters was performed. A Tier 1 antidegradation review has preliminarily determined that existing water quality uses will not be impaired by this permit action. Numerical and narrative criteria to protect existing uses will be maintained. A Tier 2 review has preliminarily determined that no significant degradation of water quality is expected in Corpus Christi Inner Harbor, which has been identified as having intermediate aquatic life use. Existing uses will be maintained and protected. The preliminary determination can be reexamined and may be modified if new information is received.

Endangered Species Review

The discharge from this permit action is not expected to have an effect on any federal endangered or threatened aquatic or aquatic dependent species or proposed species or their critical habitat. This determination is based on the United States Fish and Wildlife Service's (USFWS) biological opinion on the State of Texas authorization of the TPDES program September 14, 1998, October 21, 1998 update. To make this determination for TPDES permits, TCEQ and EPA only consider aquatic or aquatic dependent species occurring in watersheds of critical concern or high priority as listed in Appendix A of the USFWS biological opinion. Though the piping plover, *Charadrius melodus* Ord, can occur in Nueces County, the discharge is not to a watershed of high priority per Appendix A of the USFWS biological opinion. The determination is subject to reevaluation due to subsequent updates or amendments to the biological opinion. The permit does not require EPA review with respect to the presence of endangered or threatened species.

Impaired Water Bodies

Segment No. 2484 is currently listed on the state's inventory of impaired and threatened waters, the 2022 CWA §303(d) list. The listing is specifically for copper in water from U.S. Highway 181 to the Viola Turning Basin (entire segment) (AU 2484_01). The desalination process does not add additional copper to the segment. Therefore, it will not cause or contribute to the existing copper impairment.

Completed Total Maximum Daily Loads (TMDLs)

There are no completed TMDLs for Segment No. 2484.

Dissolved Oxygen

The proposed discharge is not expected to contain significant levels of oxygen-demanding constituents. Dissolved oxygen concentrations in the receiving waters are expected to consistently be protected and maintained above the criterion established for Corpus Christi Inner Harbor (3.0 mg/L).

Diffuser Analysis

Outfall 001 will consist of a submerged multi-port diffuser, located approximately 58 feet from the shoreline.

A mixing analysis of the discharge from Outfall 001 was conducted using the CORMIX 12.0GTD (Version 12.0.1.0) modeling software. This analysis relies, in part, on the documents titled *Technical Memorandum: City of Corpus Christi Desalination Study - Concentrate Modeling at Inner Harbor Channel - TPDES Permit No.: WQ0005289000* (July 26, 2021); *RFI Response Report: City of Corpus Christi TPDES Permit Application No. WQ0005289000 Response to the Request for Information (RFI)* (April 10, 2023); and *RFI Response Report: City of Corpus Christi TPDES Permit Application No. WQ0005289000 REVISION to Response to the Request for Information (RFI) dated April 6, 2023* (May 8, 2023). Information contained in those documents was used in the development of the TCEQ CORMIX analysis. Based on this initial mixing analysis, the following critical effluent percentages were recommended:

STATEMENT OF BASIS / TECHNICAL SUMMARY AND
EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES Permit No. WQ0005289000

Initial Phase - 20 MGD of produced water uses approximately 55.4 MGD of raw water and results in approximately 34.3 MGD of discharge at 40% reverse osmosis (RO) recovery. 20 MGD of produced water uses approximately 44.3 MGD of raw water and results in approximately 23.5 MGD of discharge at 50% RO recovery,

Chronic Aquatic Life Effluent Mixing Zone %:	20 MGD at 40% RO for 6.26 %
	20 MGD at 50% RO for 6.62 %
Acute Aquatic Life Effluent Zone of Initial Dilution %:	20 MGD at 40% RO for 8.76 %
	20 MGD at 50% RO for 9.26 %
Human Health Effluent %:	20 MGD at 40% RO for 4.87 %
	20 MGD at 50% RO for 5.15 %

Final Phase - 30 MGD of produced water uses approximately 83.1 MGD of raw water and results in approximately 51.5 MGD of discharge at 40% RO recovery. 30 MGD of produced water uses approximately 66.5 MGD of raw water and results in approximately 35.2 MGD of discharge at 50% RO recovery.

Chronic Aquatic Life Effluent Mixing Zone %:	30 MGD at 40% RO for 6.08 %
	30 MGD at 50% RO for 6.24 %
Acute Aquatic Life Effluent Zone of Initial Dilution %:	30 MGD at 40% RO for 8.50 %
	30 MGD at 50% RO for 8.74 %
Human Health Effluent %:	30 MGD at 40% RO for 4.72 %
	30 MGD at 50% RO for 4.85 %

The highest predicted percent effluent results should be used for the general assessment of permit effluent limits. However, since the percent effluent predictions are higher during the Initial phase (20 MGD production capacity) than they are for the Ultimate phase (30 MGD production capacity), the percent effluent values used for permitting purposes may be partitioned separately for these two permit phases (though it should be noted that future reviews, once discharge commences, will also include CORMIX model runs performed using median discharge flows). These percent effluent values are also predicted to be the maximum effluent percentages at the edges of the regulatory mixing zones for the assessment of potential concerns about salinity impacts related to this discharge. It is recommended that only the highest percent effluent predictions for each regulatory mixing zone be used for screening purposes and for the derivation of effluent limits, though again, those percent effluent values may be applied with more specificity to correspond to the two different permit phases (production capacities).

SUMMARY OF EFFLUENT DATA

Self-reporting data is not available because the facility has not been constructed.

DRAFT PERMIT CONDITIONS

The draft permit authorizes the discharge of water treatment wastes at a daily average flow not to exceed 34.3 MGD initial phase and 51.5 MGD final phase via Outfall 001.

STATEMENT OF BASIS / TECHNICAL SUMMARY AND
EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES Permit No. WQ0005289000

Effluent limitations are established in the draft permit as follows:

Outfall	Pollutant	Daily Average		Daily Maximum	
		mg/L	lbs/day	mg/L	lbs/day
001 Initial	Flow	34.3 MGD		41 MGD	
	Total Suspended Solids (TSS)	Report	Report	Report	Report
	Total Dissolved Solids (TDS)	Report	Report	Report	Report
	Chloride	Report	Report	Report	Report
	Sulfate	Report	Report	Report	Report
	pH (Standard Units, SU)	6.5 SU, min		9.0 SU	

Outfall	Pollutant	Daily Average		Daily Maximum	
		mg/L	lbs/day	mg/L	lbs/day
001 Final	Flow	51.5 MGD		62 MGD	
	TSS	Report	Report	Report	Report
	TDS	Report	Report	Report	Report
001 Final	Chloride	Report	Report	Report	Report
	Sulfate	Report	Report	Report	Report
	pH (Standard Units, SU)	6.5 SU, min		9.0 SU	

OUTFALL LOCATIONS

Outfall	Latitude	Longitude
001	27.814363 N	97.418753 W

Technology-Based Effluent Limitations

Regulations in Title 40 of the Code of Federal Regulations (40 CFR) require that technology-based limitations be placed in wastewater discharge permits based on effluent limitations guidelines (ELGs), where applicable, or on best professional judgment (BPJ) in the absence of guidelines.

The discharge of water treatment wastes resulting from desalination processes is not subject to any ELGs. Monitoring and reporting requirements for TSS have been included in the draft permit at Outfall 001 based upon BPJ due to the potential for elevated levels of suspended solids to be present in the discharge.

Water Quality-Based Effluent Limitations

Calculations of water quality-based effluent limitations for the protection of aquatic life and human health are presented in Appendix A. Aquatic life criteria established in Table 1 and human health criteria established in Table 2 of 30 TAC Chapter 307 are incorporated into the calculations, as are recommendations in the Water Quality Assessment Team's memorandum dated October 18, 2023. TCEQ practice for determining significant potential is to compare the reported analytical data from the facility against percentages of the calculated daily average water quality-based effluent limitation. Permit limitations are required when analytical data reported in the application exceeds 85 percent of the calculated daily average water quality-based effluent limitation. Monitoring and reporting is required when analytical data reported in the application exceeds 70 percent of the calculated daily average water quality-based effluent limitation.

No analytical data was submitted with the application because the facility has not been constructed. Other Requirement No. 8 has been added to the draft permit requiring sampling and analysis of the effluent upon commencement of discharge. Based on a review of the data, the permit may be reopened to add limitations or monitoring requirements, if needed.

STATEMENT OF BASIS / TECHNICAL SUMMARY AND
EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES Permit No. WQ0005289000

Total Dissolved Solids (TDS), Chloride, and Sulfate Screening

Segment No. 2484, which receives the discharge from this facility, does not have criteria established for TDS, chloride, or sulfate in 30 TAC Chapter 307; therefore, no screening was performed for TDS, chloride, or sulfate in the effluent. However, the applicant performed extensive analyses and modeling to conclude that the discharge would not impact salinity gradients in the surrounding waters and that survival, growth, and reproduction of aquatic life would not be significantly impacted and provided their report as part of their application. In addition, monitoring and reporting requirements for TDS, chloride, and sulfate have been included in the draft permit at Outfall 001 based on the presence of water treatment wastes which will include elevated levels of these constituents in the proposed discharge. Other Requirement No. 8 has been added to the draft permit requiring sampling and analysis of the effluent upon commencement of discharge. Due to the nature of water treatment wastes, TDS, chloride, and sulfate monitoring is initially placed in the draft. Based on a review of the data, the permit may be reopened to add limitations or monitoring requirements, if needed.

pH Screening

The permit includes pH limits of 6.5 – 9.0 SU at Outfall 001, which discharges directly into Corpus Christi Inner Harbor, Segment No. 2484. The segment has these same pH standards and thus limits are protective of the segment criteria.

SUMMARY OF CHANGES FROM APPLICATION

No changes were made from the application.

BASIS FOR DRAFT PERMIT

The following items were considered in developing the draft permit:

1. Application received on January 22, 2020, and additional information received on March 17 and 30, 2020; April 3, 8, 9, 14, 24, 27, and 28, 2020; May 4, 14, 19, and 21, 2020; April 10, 2023; and May 8, 2023.
2. TCEQ Rules.
3. *Texas Surface Water Quality Standards* – 30 TAC §§307.1-307.10, effective March 1, 2018, as approved by EPA Region 6.
4. *Texas Surface Water Quality Standards* – 30 TAC §§307.1-307.10, effective March 6, 2014, as approved by EPA Region 6, for portions of the 2018 standards not approved by EPA Region 6.
5. *Texas Surface Water Quality Standards* – 30 TAC §§307.1-307.10, effective July 22, 2010, as approved by EPA Region 6, for portions of the 2014 standards not approved by EPA Region 6.
6. *Texas Surface Water Quality Standards* – 30 TAC §§307.1-307.10, effective August 17, 2000, and Appendix E, effective February 27, 2002, for portions of the 2010 standards not approved by EPA Region 6.
7. *Procedures to Implement the Texas Surface Water Quality Standards (IPs)*, Texas Commission on Environmental Quality, June 2010, as approved by EPA Region 6.
8. *Procedures to Implement the Texas Surface Water Quality Standards*, Texas Commission on Environmental Quality, January 2003, for portions of the 2010 IPs not approved by EPA Region 6.
9. Memos from the Standards Implementation Team and Water Quality Assessment Team of the Water Quality Assessment Section of the TCEQ, including their diffuser memo.
10. *Guidance Document for Establishing Monitoring Frequencies for Domestic and Industrial Wastewater Discharge Permits*, TCEQ Document No. 98-001.000-OWR-WQ, May 1998.
11. EPA Effluent Guidelines: N/A.

STATEMENT OF BASIS / TECHNICAL SUMMARY AND
EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES Permit No. WQ0005289000

12. Consistency with the Coastal Management Plan: The executive director has reviewed this action for consistency with the goals and policies of the Texas Coastal Management Program (CMP) in accordance with the regulations of the General Land Office and has determined that the action is consistent with the applicable CMP goals and policies.
13. Letter dated May 28, 2014, from L'Oreal W. Stepney, P.E., Deputy Director, Office of Water, TCEQ, to Bill Honker, Director, Water Quality Protection Division, EPA (TCEQ proposed development strategy for pH evaluation procedures).
14. Letter dated June 2, 2014, from William K. Honker, P.E., Director, Water Quality Protection Division, EPA, to L'Oreal W. Stepney, P.E., Deputy Director, Office of Water, TCEQ (Approval of TCEQ proposed development strategy for pH evaluation procedures).
15. Letter dated April 10, 2023, from Katie Leatherwood, Environmental Scientist, Freese and Nichols, Inc., to TCEQ, City of Corpus Christi TPDES Permit Application No. WQ0005289000 Response to the Request for Information, with corrected table 1-2 on May 8, 2023.

PROCEDURES FOR FINAL DECISION

When an application is declared administratively complete, the chief clerk sends a letter to the applicant advising the applicant to publish the Notice of Receipt of Application and Intent to Obtain Permit in the newspaper. In addition, the Chief Clerk instructs the applicant to place a copy of the application in a public place for reviewing and copying in the county where the facility is or will be located. This application will be in a public place throughout the comment period. The Chief Clerk also mails this notice to any interested persons and, if required, to landowners identified in the permit application. This notice informs the public about the application and provides that an interested person may file comments on the application or request a contested case hearing or a public meeting.

Once a draft permit is completed, it is sent to the Chief Clerk, along with the Executive Director's preliminary decision contained in the technical summary or fact sheet. At that time, the Notice of Application and Preliminary Decision will be mailed to the same people and published in the same newspaper as the prior notice. This notice sets a deadline for making public comments. The applicant must place a copy of the Executive Director's preliminary decision and draft permit in the public place with the application.

Any interested person may request a public meeting on the application until the deadline for filing public comments. A public meeting is intended for the taking of public comment and is not a contested case hearing.

After the public comment deadline, the Executive Director prepares a response to all significant public comments on the application or the draft permit raised during the public comment period. The Chief Clerk then mails the Executive Director's response to comments and final decision to people who have filed comments, requested a contested case hearing, or requested to be on the mailing list. This notice provides that if a person is not satisfied with the Executive Director's response and decision, they can request a contested case hearing or file a request to reconsider the Executive Director's decision within 30 days after the notice is mailed.

The Executive Director will issue the permit unless a written hearing request or request for reconsideration is filed within 30 days after the Executive Director's response to comments and final decision is mailed. If a hearing request or request for reconsideration is filed, the Executive Director will not issue the permit and will forward the application and request to the TCEQ commissioners for their consideration at a scheduled commission meeting. If a contested case hearing is held, it will be a legal proceeding similar to a civil trial in state district court.

STATEMENT OF BASIS / TECHNICAL SUMMARY AND
EXECUTIVE DIRECTOR'S PRELIMINARY DECISION
TPDES Permit No. WQ0005289000

If the Executive Director calls a public meeting or the commission grants a contested case hearing as described above, the commission will give notice of the date, time, and place of the meeting or hearing. If a hearing request or request for reconsideration is made, the commission will consider all public comments in making its decision and shall either adopt the Executive Director's response to public comments or prepare its own response.

For additional information about this application, contact Thomas E. Starr at (512) 239-4570.

TEXTOX MENU #5 - BAY OR WIDE TIDAL RIVER

The water quality-based effluent limitations developed below are calculated using:

Table 1, 2014 Texas Surface Water Quality Standards (30 TAC 307) for Saltwater Aquatic Life

Table 2, 2018 Texas Surface Water Quality Standards for Human Health

"Procedures to Implement the Texas Surface Water Quality Standards," TCEQ, June 2010

PERMIT INFORMATION

Permittee Name:	<u>The City of Corpus Christi</u>
TPDES Permit No:	<u>WQ0005289000</u>
Outfall No:	<u>001 Final</u>
Prepared by:	<u>Thomas Starr, P.E.</u>
Date:	<u>November 27, 2023</u>

DISCHARGE INFORMATION

Receiving Waterbody:	<u>Corpus Christi Inner Harbor</u>
Segment No:	<u>2484</u>
TSS (mg/L):	<u>9</u>
Effluent Flow for Aquatic Life (MGD)	<u>N/A</u>
% Effluent for Chronic Aquatic Life (Mixing Zone):	<u>6.24</u>
% Effluent for Acute Aquatic Life (ZID):	<u>8.74</u>
Oyster Waters?	<u>no</u>
Effluent Flow for Human Health (MGD):	<u>N/A</u>
% Effluent for Human Health:	<u>4.85</u>

CALCULATE DISSOLVED FRACTION (AND ENTER WATER EFFECT RATIO IF APPLICABLE):

**Appendix B
Comparison of Technology-Based Effluent Limits and Water Quality-Based Effluent Limits**

The following table is a summary of technology-based effluent limitations calculated/assessed in the draft permit (Technology-Based) and calculated/assessed water quality-based effluent limitations (Water Quality-Based). Effluent limitations appearing in bold are the most stringent of the two and are included in the draft permit.

Outfall	Pollutant	Technology-Based			Water Quality-Based
